Excerpt: . ; praecordial pain, palpitations and dyspnoea. The vertigo is frequently worse on rising, and is occasionally severe enough to cause falling and even syncope. Praecordial pain, as noted under pain, is described as shooting, catching or a grip on the heart, it is generally localized about the left border of the heart. Dyspnoea, doubtless often cardiac in origin, is referred to under the respiratory system. Subjective palpitation is occasionally noted. The objective symptoms are tachycardia, cold, sweaty hands, cyanosis and blanching of the extremities. Tachycardia is often very considerable; in my experience, it is not very often an initial symptom, but is developed in the course of a week or two. It is remarkable, since in this campaign, with all men inoculated against typhoid infection, the pulse rate is on the whole slow. In war-neurasthenia it is generally high, but I make no claim...
